

Slit Width Adjustment Systems

Dual System Approach

Mitsubishi Materials offers two different slit width adjustment systems with the same goal in mind - accuracy in performance. Whether your coating conditions demand fine-control, consistency, wide ranges of adjustment, or ease of use Mitsubishi Materials has the system design.

Bolt Adjustment

- Manual adjustment for fine-control
- Expansion and contraction of slit width

Digipress Adjustment

- Quantitative process control
- Consistency and repeatability
- Digital output for ease of use
- Sliding modules for target area adjustment
