Revolutionary Hardened Steels

New coating provides amazingly long life

For Machining of Hardened Steels

IMPACT MIRACLE End Mill Series

IMPACT MIRACLE REVOLUTION

IMPACT MIRACLE REVOLUTION Coating

The combination of the (Al, Cr, Si) N coating (newly-developed), which has a high oxidation temperature and high lubricity, together with the (Al, Ti, Si) N coating, which has better wear resistance and high adhesion, allows hardened steels with even greater strength to be maintained.

Selection According to Work Materials Hardness

Revolutionary Hardened Steel

VFR255B/VFR25B

2 Flute Ball Nose End Mill

New Cutting Edge Shape: Optimization of the cutting edge curve, helix angle, and rake angle have improved the edge strength at all areas of the ball blades.

Carbide Substrate: High-grade material types ideal for high-hardness materials.

Depth of Cut

(Note 1) α is the inclination angle of the machined surface.

(Note 2) If the depth of cut is smaller, the revolution and the feed rate can be increased. Please reduce the feed rate when the surface finish is important.

(Note 3) If the rigidity of the machine or the work materials installation is very low, or chattering and noise are generated, reduce the revolution and the feed rate proportionately.

(Note 1) The tools are recommended for use only in finish machining.

(Note 2) Air blowing or oil mist is recommended as coolants.

(Note 3) Note the following points when using the tools.

- Avoid using equipment abruptly without proper preparation. After sufficiently energizing equipment, ensure that there will be no changes to the depth of cut such as due to elongation of the main axis during machining.
- If the tools are used immediately after rough machining of a surface, large uneven areas (cusp heights) will cause deflection of the tools and waviness of the machined surface. Therefore, it is recommended to add a medium finish machining process which uses the same value of ae as indicated in the table above.

(Note 4) α is the inclination angle of the machined surface.

Application Example

VFR2SBF

Workpiece : Pre-hardened Steel

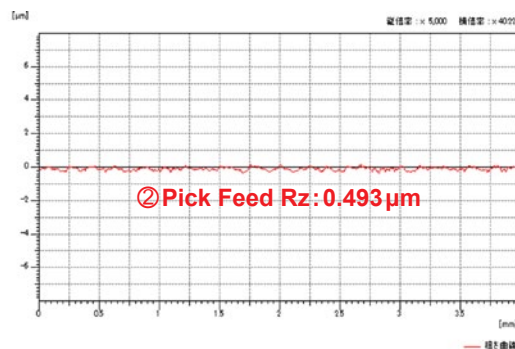

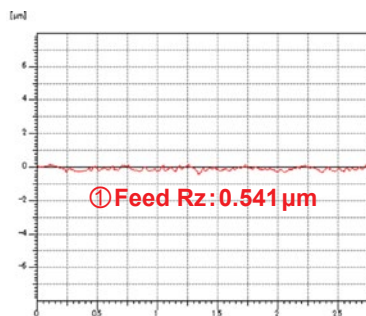

Indexed 5-axis machining can prevent machining at the tips of ball nose end mills.

Excellent tool conditions after 31 hours of finish machining.

A surface roughness of Rz: 0.8 μ m or lower can be achieved.

Cutting Conditions Holder : HSK-A63
