

Digipress Adjustment System

Mechanism of Digipress

1. Hydraulic pressure unit enables control of slit-width
2. Digital output for ease of use
3. Sliding modules for target area adjustment

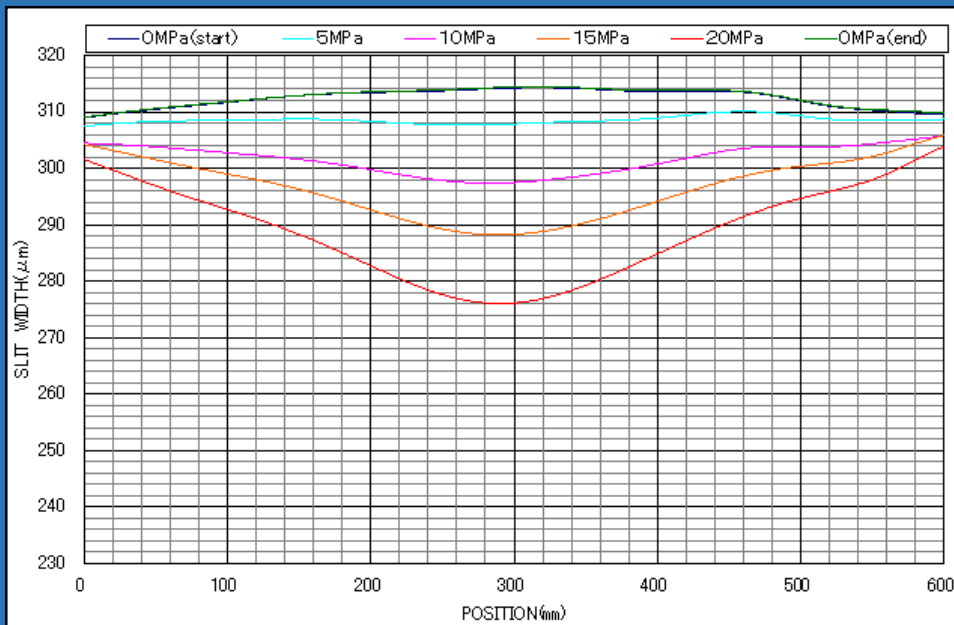

Performance of Digipress

1. High uniformity : Down to 1% cross-web achievable
2. Target area adjustment in focused areas
3. Adjusting capacity : Max 30 μ m (one unit), Max 80 μ m (three units)
4. Quantitative process control

Slit width change by Digipress

One Digipress Unit (Center of 600mm Slot-die)
