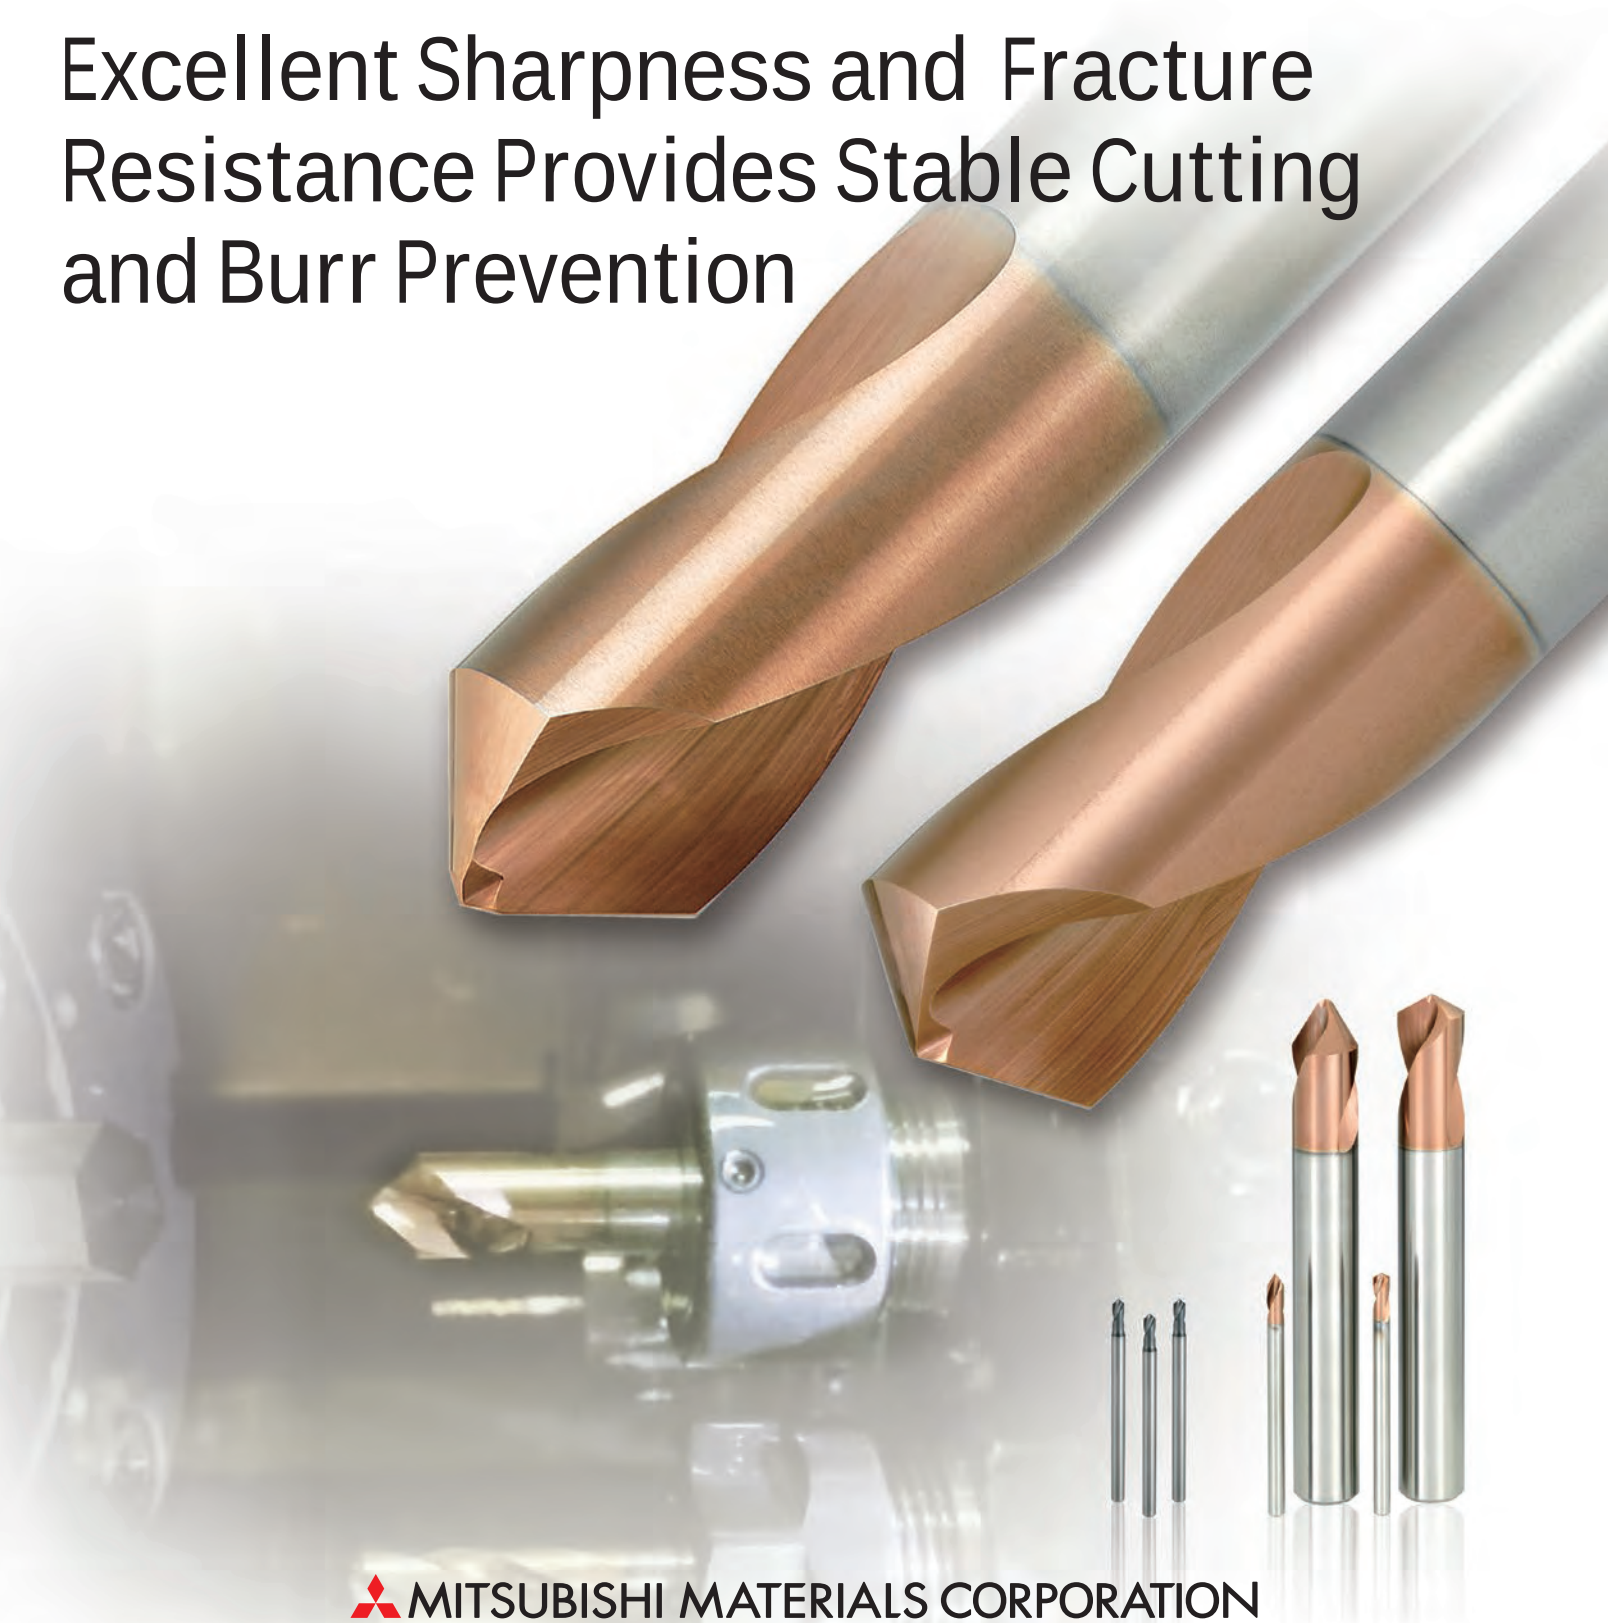
Solid Carbide Drills for Centering and Chamfering

Leading Drill Series DLE

Item addition

Excellent Sharpness and Fracture Resistance Provides Stable Cutting and Burr Prevention

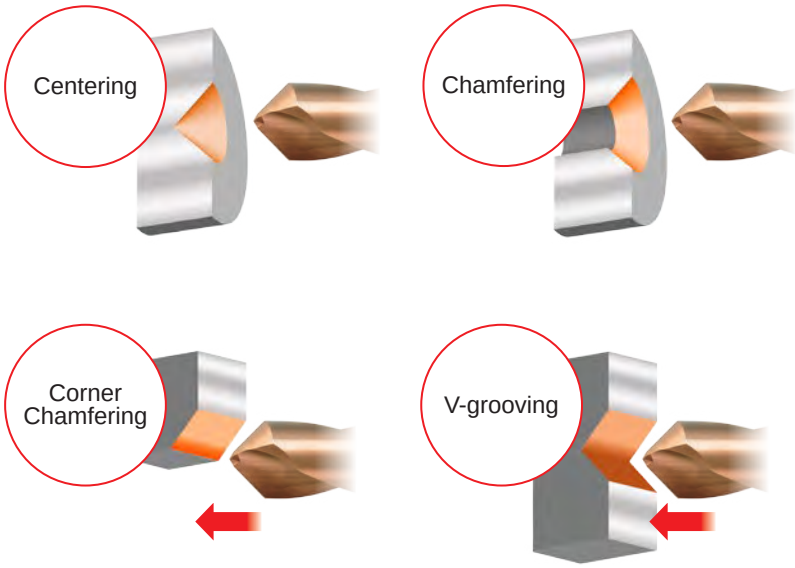


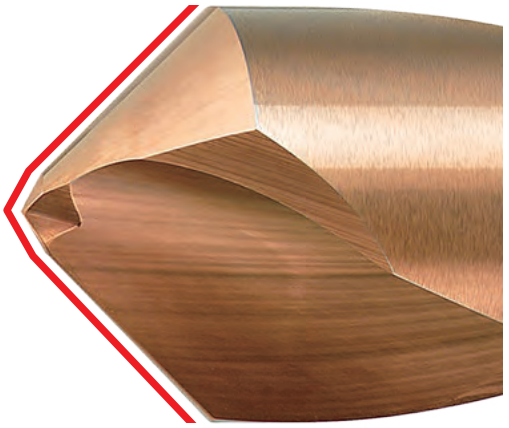
MITSUBISHI MATERIALS CORPORATION

Solid Carbide Drills for Centering and Chamfering

Leading Drill Series DLE

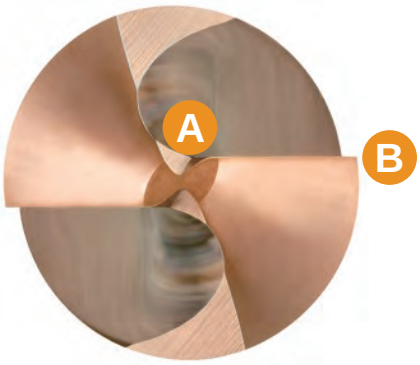
Completes strict standards for centering and chamfering.



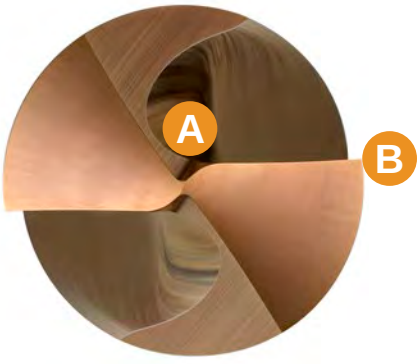


Range of Use

Features



Point Angles SIG 60° 90°



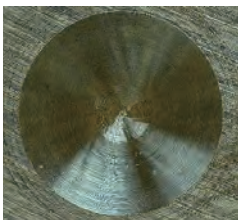
Point Angles SIG 120° 145°

A Thinning Geometry

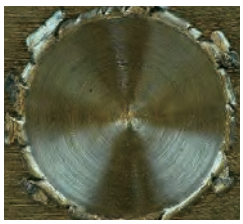
The thinning pocket promotes smooth chip evacuation and provides excellent hole position accuracy. Additionally, the negative cutting edge of the drill point offers high cutting edge strength.

B Sharp Cutting Edge and High Fracture Resistance

Sharp cutting edge and high fracture resistance provides stable cutting and burr prevention.



DLE



Conventional

Two-step Point Angles 60°, 90°

Two-step point angles ensure strength at the center and prevent sudden fracturing.

*The central area will not have a 60°, 90° bottom hole angle.

DLE

High Strength of Center

Conventional

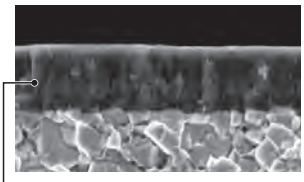
Fractures of Center

One-step Point Angles 120°, 145°

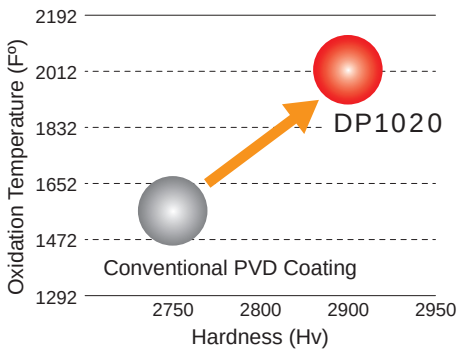
One-step point angles help high-speed steel or carbide drills to bite from the center in next processes.

Coated Grade DP1020

DP1020 grade offers excellent wear resistance and reduced friction for longer tool life and a versatile range of applications.



With Accumulated Al-Ti-Cr-N Based PVD Coating



Extensive Support for CNC Automatic Lathes

Diverse lineup of shanks compatible with ER collets.

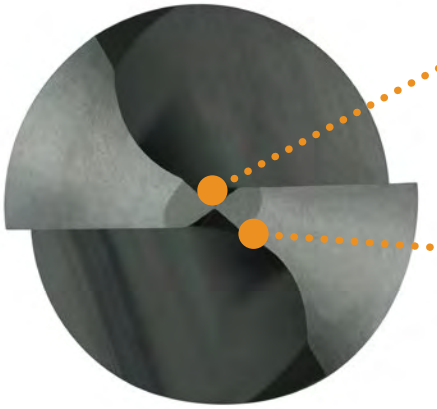
DCON(Connection Diameter)	.197 inch=ER8
DCON	.276 inch=ER11

Solid Carbide Drills for Centering and Chamfering

Leading Drill Series

DLE

SIG 90° Mini Size ø.0394"—ø.0984"



Thinning Geometry

Chip evacuation space in center part improves the bite performance, and ensure for good finished hole position accuracy.

Two-step Point Angles

Two-step point angles ensure strength at the center and prevent sudden fracturing.

*The central area will not have a 90° hole bottom.

Unique Cutting Edge Shape

Large rake angle and sharp cutting edges can minimize the generation of burrs.

AISI 304
Cutting Example

DLE

Conventional

New Grade "DP102A"
Excellent Lubricity and Heat Resistance

The PVD-coated carbide grade DP102A has excellent lubricity and heat resistance, and exhibit outstanding wear resistance particularly under low-speed to medium-speed cutting speed.

Long-neck Design

Long neck length allows to use the chamfering even deep inside holes.

Note 1) In the region of roughly **DC**/4, which is the region of the two-step point angles, the central area will not have a 60°, 90° bottom hole angle. Chamfering will also not be possible in this region.
Note 2) The centering diameter should be less than the drill diameter (processing diameter) **DC** and the usable length **LU** should be referred to as a guideline.

● : USA Stock

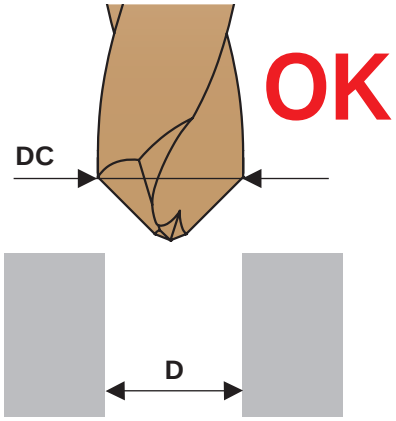
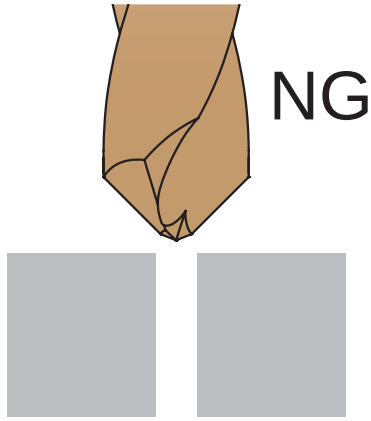
Drill Diameter Selection

When Chamfering

With respect to guide hole diameter **D**, select the drill diameter (cutting diameter) **DC** to be within the range of **D** < **DC** < 2**D**.

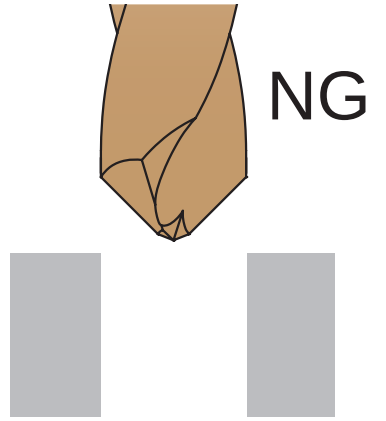


Example) If guide hole diameter **D** is .197": Drill diameter **DC** should be equal to or greater than .236" but less than .394". Select a **DC** of .236", .276", or .315".



If DC is equal to or greater than 2D:

If drill diameter **DC** is too large compared to guide hole diameter **D** (equal to or greater than 2**D**), chamfering cannot be performed.

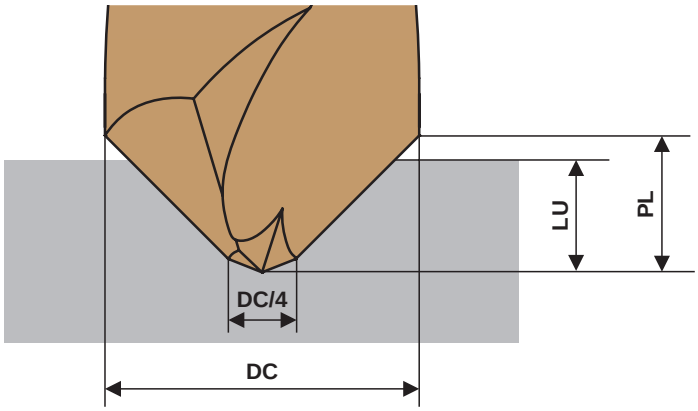


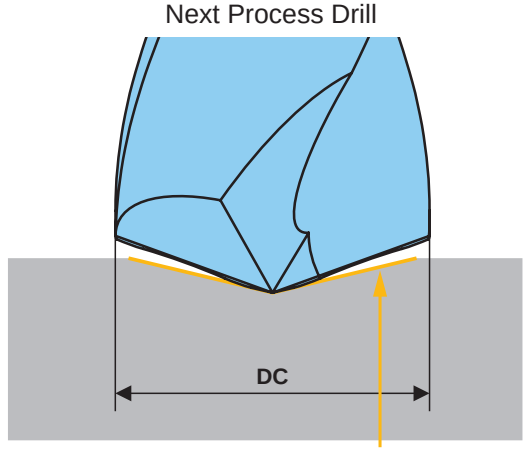
If DC is a drill diameter equal to D:

Chamfering cannot be performed if drill diameter **DC** is the same as guide hole diameter **D**.

When Centering

The centering diameter should be less than the drill diameter (processing diameter) **DC** and the usable length **LU** should be referred to as a guideline.
The central area of holes (approx 25% of the full diameter) formed by two step point angles will not have their respective 60º and 90º angles. Chamfering is also not possible in the center areas.
Select a centering drill with a larger point angle than the final hole drill if is desired to make initial contact with the center.





Centering of Point Angle SIG145°

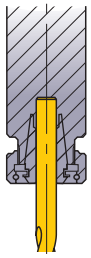
12	.4724	65	.0016 (.0008—.0024)	280	.0031 (.0016—.0039)	195	.0028 (.0016—.0035)

Note 1) When chamfering a circumference of a guide hole, make sure that the tool diameter(**DC**) is **D** <**DC** <2**D**.
Note 2) When centering into curved or inclined surfaces, please reduce the feed rate.
Note 3) When V-grooving and chamfering, please reduce cutting conditions.
Note 4) When chatter vibration or abnormal noise is generated, please shorten the time of dwell program or lower the rotation speed.
Note 5) When centering, please do not exceed the **LU** (usable length).

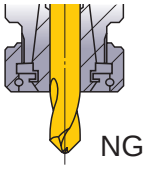
■ Operational Guidance

Drill Holding



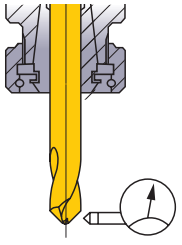
Collet chuck holds the drill securely.

Drill Installation



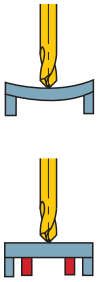
Do not clamp on the flutes.

Installation Tolerance

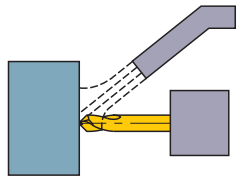


Run-out ≤ .001 inch

Thin Workpiece



Coolant Method



Coolant positions,at the end at the center are ideal.

Point Angle SIG 90°, 120° and 145°

Recommended Cutting Conditions

(inch)

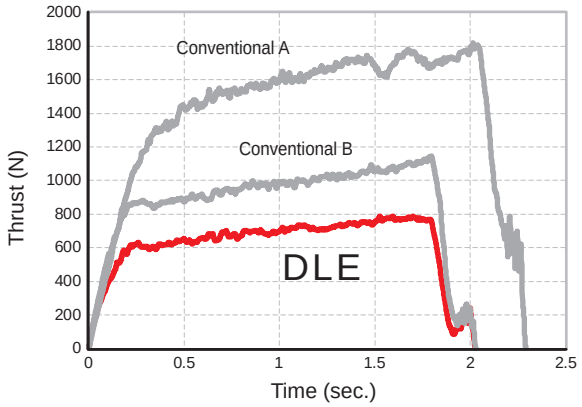
Cutting Performance

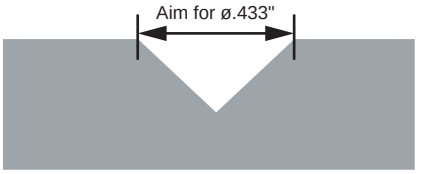
Comparison of Cutting Performance during Centering

Ideal for processing at low power, when compared to conventional products.



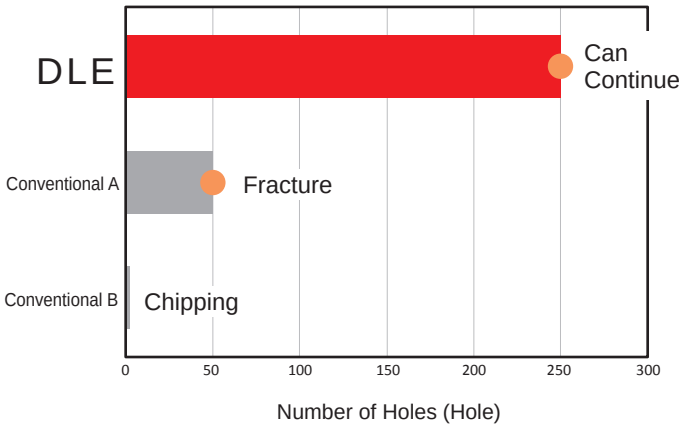
*Differences along the time axis are a result of differences in processing depth.

<Cutting Conditions>
Workpiece
Material : AISI 1045
Drill : DLE1200S120P090
ø.472"
Cutting Speed : vc = 195 SFM
Feed per Rev. : fr = .0024 IPR
Cutting Mode : Wet Cutting
External Coolant
(Chlorine Free Emulsion)
Machine : Vertical MC

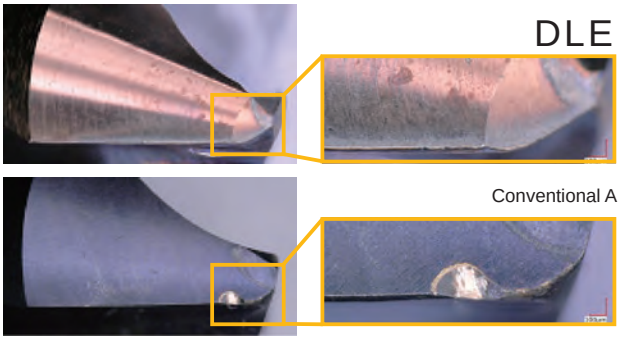


Comparison of Centering Life when Processing AISI 304

The two-step point angles, together with the negative cutting edge shape and cutting edge treatment of the thinning pocket, provide outstandings excellent with no abnormal damage.

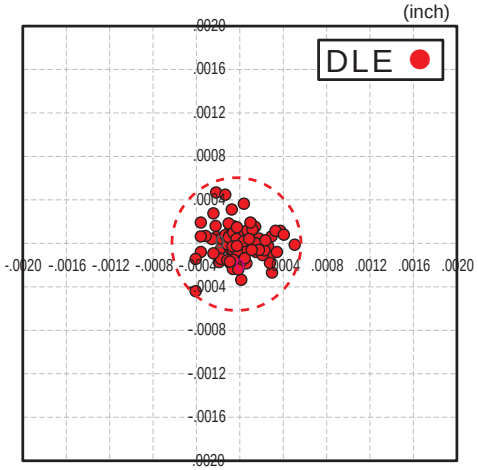


<Cutting Conditions>
Workpiece
Material : AISI 304
Drill : DLE0600S060P090
Cutting Speed : vc = 80 SFM
Feed per Rev. : fr = .0024 IPR
Hole Depth : Aim for hole dia. ø.197"
Cutting Mode : Wet Cutting
External Coolant
(Water-insoluble Coolants)
Machine : Small Automatic Lathes



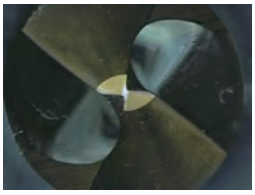
Centering Hole Position Precision for JIS SUS420J2

Stainless steels are likely to experience abnormal damage from build-up edge. Compared to conventional products which often suffered early fractures, the DLE has longer tool life.



<Cutting Conditions>
Workpiece
Material : JIS SUS420J2
Drill : DLE0600S060P090
Cutting Speed: vc = 50 SFM
Feed per Rev. : fr = .0016 IPR
Hole Depth : Aim for hole dia. ø.217"
Cutting Mode : Wet Cutting
External Coolant
(Chlorine Free Emulsion)
Machine : Vertical MC

DLE

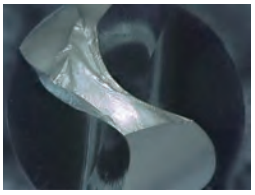


After 90 Holes

Conventional A

Measurement impossible due to early fracture

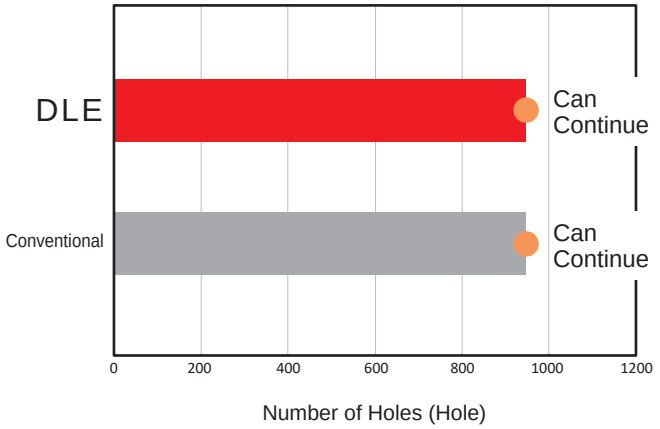
Conventional B



Measurement impossible due to early fracture

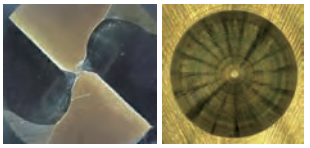
Cutting Performance

Comparison of Centering Life when Processing AISI 304 : Point Angle 120°

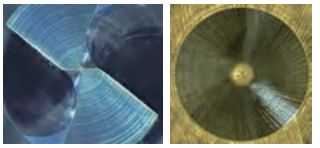


<Cutting Conditions>
Workpiece
Material : AISI 304
Drill : DLE0600S060P120
Cutting Speed : vc=65 SFM
Feed per Rev. : fr=.0024 IPR
Hole Depth : Aim for hole dia. ø.217"
Cutting Mode : Wet Cutting
External Coolant
(Water-insoluble Coolants)
Machine : Vertical MC

DLE

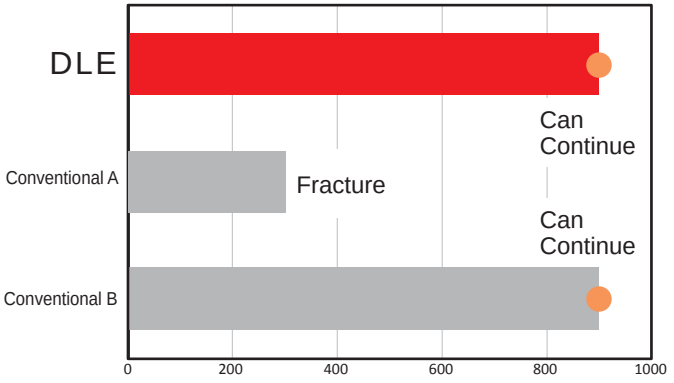


Conventional



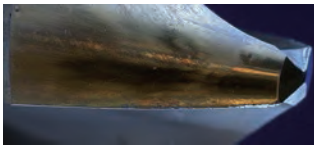
Vibration occurred.
Poor surface quality
(Rough surface).

Comparison of Centering Life when Processing AISI 304 : Point Angle 60°



<Cutting Conditions>
Workpiece
Material : AISI 304
Drill : DLE0600S060P060
Cutting Speed : vc=50 SFM
Feed per Rev. : fr=.0008 IPR
Hole Depth : Aim for hole dia. ø.217"
Cutting Mode : Wet Cutting
External Coolant
(Chlorine Free Emulsion)
Machine : Vertical MC

DLE



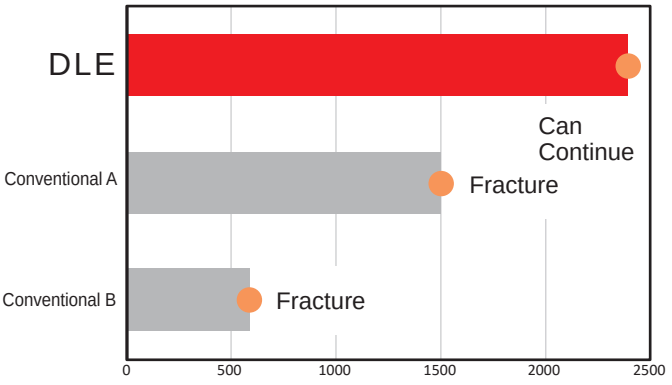
Initial Wear

Conventional B

Fine chipping on the outer cutting edge.

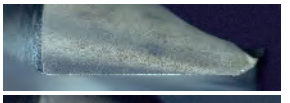
Comparison of Centering Life when Processing AISI 304 : Point Angle 90° (small-diameter ø.0787")

When processing stainless steel, DLE drills can realize longer tool life with outstanding heat resistance, and wear resistance for boundary wear.



<Cutting Conditions>
Work Material : AISI 304
Drill : DLE0200S030P090
Cutting Speed : vc=100 SFM
Feed per Rev. : fr=.0018 IPR
Cutting Mode : Wet Cutting
External Coolant
(Water-soluble Coolants)
Machine : Vertical MC

DLE
After 2400 holes machining



Conventional A
After 1500 holes drilling

Conventional B
After 600 holes drilling

Application Example

Drill		DLE0400S040P090	DLE0600S060P090
Workpiece		AISI 1010 (Equipment Parts) Centering and Chamfering 	AISI 304 (Machine Parts)  Centering and Chamfering
Cutting Conditions	Cutting Speed **vc** (SFM)	100	80
	Feed per Rev. **fr** (IPR)	.0018	.0020
	Guide Hole Dia. (inch)	ø.118	ø.197
Cutting Mode		Wet Cutting Extarnal Coolant (Chlorine Free Emulsion)	Wet Cutting Extarnal Coolant (Water-insoluble)
Machine		NC Lathe, Tool Rotation	CNC Automatic Lathe
Results		 Burrs are suppressed Compared to conventional product, the DLE has smaller burrs and a longer expected life.	 More than 200 holes Good surface finishes and no tool damage While conventional product often caused chipping to occur, the DLE is more stable and has been used to complete drilling of 200 holes with no damage on the cutting edge.

Drill		DLE0300S030P090	DLE0200S030P090
Workpiece		AISI 303 (Engine Parts)  Centerring and Chamfering	AISI 303 (Engine Parts)  Centering of ø.024" hole
Cutting Conditions	Cutting Speed **vc** (SFM)	80	125
	Feed per Rev. **fr** (IPR)	.0016	.0008
	Guide Hole Dia. (inch)	ø.079	ø.024
Cutting Mode		Wet Cutting Extarnal Coolant (Water-insoluble) Curved Surface	Wet Cutting Extarnal Coolant (Water-insoluble)
Machine		CNC Automatic Lathe	CNC Automatic Lathe
Results		DLE  Conventional  After 60 Holes After 1 Hole While the conventional product generated burrs after drilling 1 hole, DLE achieve good surface quality with no sudden fractures even after drilling 60 holes.	Comparison of Rake Faces after centering DLE Conventional   Fracture 60000 holes 30000 holes DLE had a tool life twice as long as the conventional product, and was able to carry out cutting with no fractures.

The above application examples are customer's applications, so it can be different from the recommended conditions.

Solid Carbide Drills for Centering and Chamfering

Leading Drill Series DLE

For your safety
●Don't handle inserts and chips without gloves. ●Please machine within the recommended application range and exchange expired tools with new ones in advance of breakage. ●Please use safety covers and wear safety glasses. ●When using compounded cutting oils, please take fire precautions. ●When using rotating tools, please make a trial run to check run-out, vibration and abnormal sounds etc. ●Grinding or heating of cutting tools produces dust and mist. Inhaling large amount of dust or contacting with eyes and skins may harm your body.
